Read the passage then choose the correct words from a, b, c or d:

My father was a printer, but he was deaf. Though he could not hear, he felt through the soles of his shoes the pounding and rumbling of the giant printing presses that daily spat out the newspaper he helped create.

As a boy, my father learned how to speak with his hands. As a man, he learned how to turn lead-type letters into words and sentences. Sometimes my father felt sad as most of the workers who could hear were unkind. But my father did not lack friends. There were other printers at the plant who were deaf. They had also learned to talk with their hands. One day, while the giant presses ran, my father spotted a fire flickering in a far corner of the pressroom. The fire was spreading quickly, silently. Suddenly, the wood floor burst into flames. My father knew he had to tell everyone. He couldn't speak to shout a warning. But he could speak with his hands. He did not hesitate. He jumped onto an ink drum and waved his arms excitedly until; he caught the attention of a fellow printer who also couldn't hear a sound. My father's hands shouted through the terrible noise of the printing presses, FIRE! FIRE!

TELL THE HEARING ONES!

His friend climbed onto a huge roll of newsprint. His fingers screamed to the other deaf workers, who ran to fellow workers who could hear. They pointed to the fire, which had now spread to the wall next to the only exit.

Not one of my father's friends left until everyone knew of the danger. My father was the last to escape. The printers stood in the street, broken glass at their feet. They embraced one another as the fire engines arrived. They were happy to be alive. When the printing plant finally reopened, my father went back to the work he loved.

<u>Read the passage then choose the correct words from a,b,c or d:</u>

Nowadays, we use so many machines that life is unimaginable without them. Because of machines, we can travel farther and faster. We can access and process greater quantities of information at ever-increasing speeds. We can perform dangerous and complicated tasks more safely, efficiently, and precisely. In our homes, schools, hospitals, factories, stores, and offices, there are machines from the simplest gadgets to the most sophisticated electronic systems. In fact, we would have to travel very far indeed to find a place on this earth where we wouldn't encounter a machine of some kind.

The invention of machines and their widespread adoption have transformed human society. Beginning with the steam engine in 1705, the Industrial Revolution brought about massive economic and social changes that continued into the twentieth century. With the

train and automobile came increasing urbanization and mobility, and the telegraph—and later the telephone, radio, and television—enabled people to communicate over long distances.

Technological progress that had been thousands of years in the making accelerated rapidly with the advent of the electronic computer in 1941.

Eight years later, the stored-program computer vastly improved programming procedures. As computer science took off in universities, far-fetched ideas that had once belonged to the realm of science fiction became realities. One such idea was to build mechanical creatures that could think and act independently.

The idea of mechanical men has fascinated thinkers and inventors for centuries. Elaborate mechanical toys and sophisticated creatures, such as a mechanical body that could write and draw, were constructed in France in the eighteenth and nineteenth centuries, but such inventions, as amazing as they were, ended up in various museums as objects of curiosity.
